

The XP V2 utilizes many of the same systems and construction methods developed for the V1, just in a more compact and lightweight package. It also stays true to the hard-sided pop-up design featured on the V1. By utilizing XPCamper's unique truck tray system, the V2 offers a huge amount of living and storage space in an extremely compact package, while still providing you with tons of utility from your truck when the camper is removed. The pricing on the V2 offers an incredible value, which makes it the perfect introduction into the quality truck camper overland lifestyle.
